THANDO MAJOLA

SOFTWARE ENGINEERING STUDENT | AI AUTOMATION & SYSTEMS INTEGRATION

PHONE | EMAIL | Thando-init - Overview | PORTFOLIO | LINKEDIN | UPWORK

Software Engineering student at WeThinkCode with a customer support and operations background, pivoting into AI automation and systems integration. Skilled in n8n, API integrations, and workflow automation, with hands-on experience building automated solutions with Zapier, Zoho, and Google Scripts. Combining technical expertise with proven client-facing experience to design efficient, scalable automation.

TECHNICAL SKILLS

- n8n & Make Workflow Automation
- API Integration
- AI Automation Tools
- Google Apps Script
- Google Workspace & Excel/Sheets
- Python & Java

PROFESSIONAL SKILLS

- Clear & Empathetic Communication
- Problem-Solving & Adaptability
- Attention to Detail
- Time Management & Multitasking

EDUCATION

Software Engineering: WeThinkCode

Sept 2025 – Dec 2026

• Intensive programme covering Python, Java, data structures, algorithms, and software development.

WORK EXPERIENCE

E-Commerce Client Support Associate • PrimePicks

02/2022 | 11/2023 | Remote

- Resolved 20+ support tickets weekly via phone, email, and live chat using Zendesk, maintaining an 85% customer satisfaction (CSAT) score and an average response time of 4–5 minutes.
- Assisted customers with order tracking, refunds, product inquiries, and troubleshooting, ensuring high satisfaction.
- Maintained and updated client records, ensuring accurate and organised data management.
- Partnered with internal engineering and sales teams to resolve complex customer issues, reducing escalation turnaround time by 15%.
- Analysed client feedback to identify trends and recommend process improvements for a better user experience.

PERSONAL PROJECTS

Co-Founder - Part Time

04/2023 | 12/2024

- Business Launch & Brand Development: Co-founded an eco-friendly cleaning service specialising in sustainability, securing 3 long-term residential cleaning contracts and exceeding initial goals by 12%.
- Customer-Centric Service Model: Building a customer-centric brand with a flexible and personalised approach, driving increased client acquisition.
- Market Expansion & Innovation: Actively exploring service expansion to include Airbnb cleaning, with plans to onboard 5+ properties within the next 6 months, and developing an integrated app to streamline booking and improve client interaction.
- Tech & Process Optimisation: Created automated workflows using Zapier, Zoho, and Google Scripts, saving approximately 30 minutes per task.

CreatorOps — YouTube Creator Analysis Tool

2026-03-01

- Built a YouTube Creator Analysis tool using the YouTube API that aggregates creator data and surfaces key performance metrics, including channel growth trends, recent video performance, and mean vs. median views to distinguish consistency from virality.
- Developed engagement and audience-quality indicators (views relative to channel size, cross-video performance consistency) to help brands evaluate influencers beyond follower counts.
- Experimented with estimating influencer rates and approximate earning ranges based on industry benchmarks, enabling more informed brand and agency decisions.
- Evolving the project into CreatorOps, an event-driven creator intelligence and campaign-operations platform with automated data ingestion, scheduled monitoring, AI-assisted insights, alerts, and cloud deployment.
